NUMBER ONE FOR PLANT HIRE
OPERATED AND SELF DRIVE HIRE

Date: 5th November 2008

RULEBOOK BRIEF

On Track Plant Module

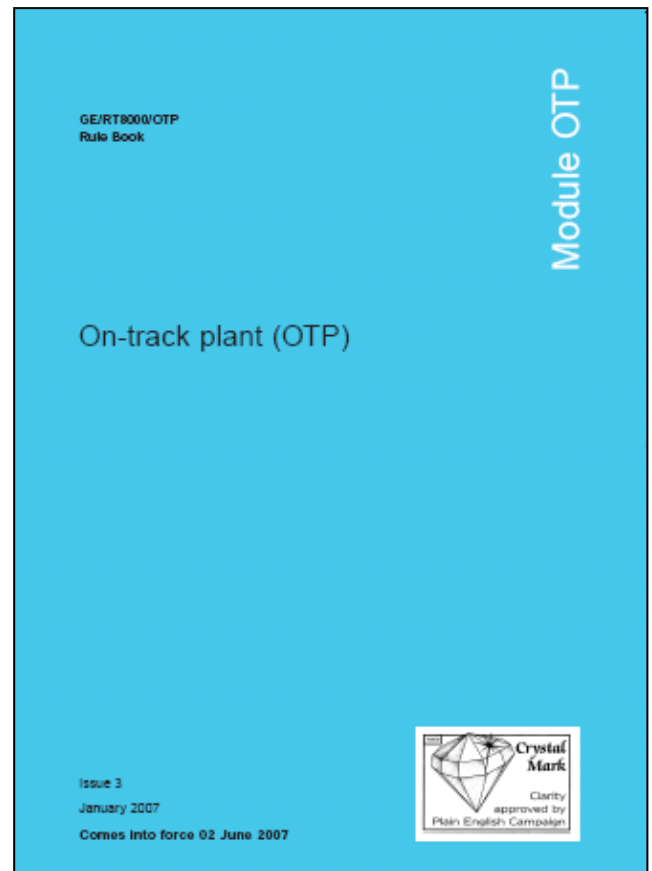

On Track Plant Operators are expected to possess an in-depth understanding of the rules and regulations concerning Road Rail Vehicles

When you are assessed to the RPA Standards by one of our in-house assessors they have to ask a series of questions concerning this module. Failing to provide the correct answers or leading the assessor to think you are weak in this knowledge area will likely result in a fail, even if you are very good in the cab operating the machine.

I cannot stress enough how important this module is and that you must take time out to learn the theory even if you are confident of your operating skill in the machine.

When you are notified of an assessment make sure you have a copy of this module (copies available from either myself or Jitka at Wokingham) and that you have read & understood it before the assessment takes place.

If you have issues with the written text or the way in which rules are explained in the book then tell the assessor who will find an alternative method of assessing your knowledge.
