

On Track Plant (OTP) towed loads

Where trailers are coupled to the towing vehicle, unless they all have a service brake fitted, the Gross Laden Weight of the trailer consist shall not exceed 100% of the Gross Vehicle Weight of the towing vehicle, or less if detailed as a limitation the Certificate of Engineering Acceptance.

NB This instruction applies to towing and propelling and is mandated by Network Rail.

If the RRV and all trailers are fitted with a fully functional service brake system, then the gross towed weight permitted is as described on the certificate of engineering acceptance for the towing vehicle.

In all other circumstances the maximum gross towed weight permitted is 100% of the weight of the towing vehicle (this could be multiple trailers).
